Elsevier's Dictionary of Automation Technics B. Zhelyazova 2005-04-28 This dictionary contains 13,000 terms with more than 4,000 cross-references used in the following fields: automation, technology of management and regulation, computing machine and data processing, computer control, automation of industry, laser technology, theory of information and theory of signals, theory of algorithms and programming, philosophical bases of cybernetics, cybernetics and mathematical methods. Automation pertains to the theory, art, or technique of making a machine, a process or a device more fully automatic. Computers and information processing equipment play a large role in the automation of a process because of the inherent ability of a computer to develop decision that will, in effect, control or govern the process from the information received by the computer concerning the status of the process. Thus automation pertains to both the theory, and techniques of using automatic systems in industrial applications and the processes of investigation, design and conversion to automatic methods.

Automatic control, automatic materials handling, automatic testing, automatic packaging, for continuous as well as batch processing, are all considered parts of the overall or completely automatic process. The Dictionary consists of two parts, Basic Table and Indexes. In the first part the English terms are listed alphabetically, numbered consecutively and followed by its German, French and Russian equivalents. English synonyms appear as cross-references to the main entries in their proper alphabetical order. The second part of the Dictionary, the Indexes, contains separate alphabetical indexes of the German, French and Russian terms. The reference number(s) with each term stands for the number of the English term(s) in the basic table. Elsevier's Dictionary of Automatic Technics will be a valuable tool for specialists, scientists, students and everyone who takes interest in the problems of investigation devoted to the design, development, and applications of methods and techniques for rendering a process of group of machines self-actuating, self-moving, or self-controlling.

Integrale geboortezorg Hajo Wildschut 2018-09-21 Integrale geboortezorg behandelt de vele aspecten van wetenschappelijk verantwoorde integrale geboortezorg en laat zien welke eisen eraan gesteld worden. Hierbij is het van belang dat zorgprofessionals over de grenzen van hun eigen discipline heen kijken en samenwerken met collega's uit andere disciplines. Integrale geboortezorg betekent dat de (aanstaande) ouders en het kind de spil zijn waar de zorg om draait. Dat traject begint al vóór de bevruchting en loopt door tot het kind twee is. Aan bod komen onder andere positie van de (aanstaande) ouder(s) en het kind, kwaliteit van zorg, risicomangement, taken en verantwoordelijkheden, omgang met klachten, incidenten, complicaties en calamiteiten, integraal zorgdossier en e-health, financiële aspecten, deskundigheidsbevordering en het belang van interprofessionele samenwerking. Dit boek is bedoeld als een handreiking voor alle zorgprofessionals werkzaam in de geboortezorg. Het maakt nieuwsgierig; het zegt niet hoe het moet, wel hoe het kan.

Gebäude.TechNIK.Digital. Christoph Treeck, van 2016-10-12 BIM ist nach dem Stufenplan für Deutschland »eine kooperative Arbeitsmethodik, mit der auf der Grundlage digitaler Modelle eines Bauwerks die für seinen Lebenszyklus relevanten Informationen und Daten konsistent erfasst, verwaltet und in einer transparenten Kommunikation zwischen den Beteiligten ausgetauscht oder für die weitere Bearbeitung übergeben werden«. Vor diesem Hintergrund hilft virtuelles Bauen, Zeitpläne und Kosten einzuhalten und Risiken zu minimieren. Planänderungen können zeit- und kosteneffizient über sämtliche Realisierungsebenen hinweg interpretations- und fehlerfrei realisiert werden. Schließlich profitiert das Facility Management durch die konsequente Weiternutzung der digitalen Gesamtdokumentation in der Betriebs- und Nutzungsphase. Dieses Fachbuch beschreibt den Status Quo dieser neuen Disziplin, die sich zunehmend z.B. bei öffentlichen Ausschreibungen – auch international – zu einer verbindlichen Konvention entwickelt. In diesem Kontext werden neueste Erkenntnisse und Trends für die Anwendung der Methode BIM in der Praxis in den Gewerken Trinkwasser, Energie und Brandschutz reflektiert sowie auch die rechtlichen Aspekte zukunftsweisend erläutert.
