**Global food security: ethical and legal challenges** Carlos M. Romeo Casabona 2010-08-10 Food security will exist when all people, at all times, have physical and economic access to sufficient, safe and nutritious food to meet their dietary needs and food preferences for an active and healthy life (as stated in the Rome Declaration in 1996). Given the dimension of the current global food crisis, food security means adopting effective and specific actions at individual, household, national, regional and global levels. Food security invites us to reflect upon ethical principles like human equity, justice between current and future generations, respect for human dignity and sustainable food production. We strive to maintain our basic ethical convictions and engage in societal debates about other important values. While we do this, we may have to change our ways of life and learn to create new priorities in the face of global responsibility. Science and technology are key tools to reach the Millenium Goals, providing both society and decision makers alike with relevant information and new options within an ethical framework. The contributions found in this publication bring together the perspectives of a diverse group of authors. Coming from the academic world, the public sector and non-governmental organisations (NGOs), they provide the latest views on ‘Global food security: ethical and legal challenges’.
