De kant van Swann Marcel Proust 2018-11-22 Op zoek naar de verloren tijd is een van de grootste triomfen van de wereldliteratuur. In deze romancyclus wordt de lezer door het zintuiglijke proza van Marcel Proust gevangen in een web van subtiliteiten, onvergetelijke personages, verfijnde ironie, glasheldere zinnen en messcherpe observaties. In De kant van Swann, het eerste deel van de cyclus, gaat de verteller herinneringsgewijs terug naar zijn jongensjaren en adolescentie. Hij vertelt over zijn initiatie in de liefde en in het complexe salonleven aan het einde van de negentiende eeuw, waarbij hij zich spiegelt aan de intrigerende figuur Charles Swann.

Recycling in Textiles Youjiang Wang 2006-03-20 An increasing amount of waste is generated each year from textiles and their production. For economic and environmental reasons it is necessary that as much of this waste as possible is recycled instead of being disposed of in landfill sites. In reality the rate of textile recycling is still relatively low. On average, approximately ten million tonnes of textile waste is currently dumped in Europe and America each year. Considering the diversity of fibrous waste and structures, many technologies must work in concert in an integrated industry in order to increase the rate of recycling. Recycling in textiles shows how this can be achieved. The first part of the book introduces the subject by looking at the general issues involved and the technologies concerned. Part Two explores the chemical aspects of textile recycling. Part Three focuses on recycled textile products, including nonwovens and alternative fibres. Finally, the last part of the book discusses possible applications of recycled textiles, including using recycled products in the operating theatre, for soil stabilisation and in concrete reinforcement. Recycling in textiles presents several promising technologies and ideas for recycling systems. This is the first book of its kind to bring together textile recycling issues, technology, products, processes and applications. It will prove an invaluable guide to all those in the industry who are now looking for ways to recycle their textile waste.

*Zeolites in Industrial Separation and Catalysis* Santi Kulprathipanja 2010-01-26 This first book to offer a practical overview of zeolites and their commercial applications provides a practical examination of zeolites in three capacities. Edited by a globally recognized and acclaimed leader in the field with contributions from major industry experts, this handbook and ready reference introduces such novel separators as zeolite membranes and mixed matrix membranes. The first part of the book discusses the history and chemistry of zeolites, while the second section focuses on separation processes. The third and final section treats zeolites in the field of catalysis. The three sections are unified by an examination of how the unique properties of zeolites allow them to function in different capacities as an adsorbent, a membrane and as a catalyst, while also discussing their impact within the industry.

Sustainable Development Paul Sillitoe 2014-08-30 With growing evidence of unsustainable use of the world's resources, such as hydrocarbon reserves, and related environmental pollution, as in alarming climate change predictions, sustainable development is arguably the prominent issue of the 21st century. This volume gives a wide ranging introduction focusing on the arid Gulf region, where the challenges of sustainable development are starkly evident. The Gulf relies on non-renewable oil and gas exports to supply the world's insatiable CO2 emitting energy demands, and has built unsustainable conurbations with water supplies dependent on energy hungry desalination plants and deep aquifers pumped beyond natural replenishment rates. Sustainable Development has an interdisciplinary focus, bringing together university faculty and government personnel from the Gulf, Europe, and North America -- including social and natural scientists, environmentalists and economists, architects and planners -- to discuss topics such as sustainable natural resource use and urbanization, industrial and technological development, economy and politics, history and geography.
